

Maintenance Program Manager (MPM)

Simplified tracking through automation

EmpowerMX Maintenance Program Manager helps simplify and manage the maintenance program by automating the process of tracking routine maintenance events.

EmpowerMX Maintenance Program Manager enables our customers to successfully manage the maintenance of all their assets.

It is included in the EmpowerMX AERO, MRO, OEM, and Defense solutions—designed to ensure aircraft are fully airworthy and maintained in line with maintenance programs.

Simple Tracking

Operators using this powerful tool in their maintenance departments have instant access to routine task information for each aircraft in their fleet. MPM also provides operators with the means to track, add, revise and plan events and check related activities for single aircraft and/or fleet activities dynamically and in real time.

Efficient Asset Management

MPM manages assets in a hierarchical structure that enables users to quickly view the current state of any asset or aircraft. Once the maintenance program is created and associated with an asset, all relevant resources required, such as materials, tooling and skills, can be fed into Planning Manager or equivalent software to enable customers to effectively plan all maintenance activity.

Safety and Airworthiness

Customers require aircraft that are maintained to the highest levels of airworthiness alongside compliance to aviation industry standards and regulatory bodies. MPM ensures you can achieve this.

Instant Maintenance Information

MPM asset management features allow operators to easily manage the complex identification, configuration, composition, and time in tasks associated with every maintenance action taken against an asset.

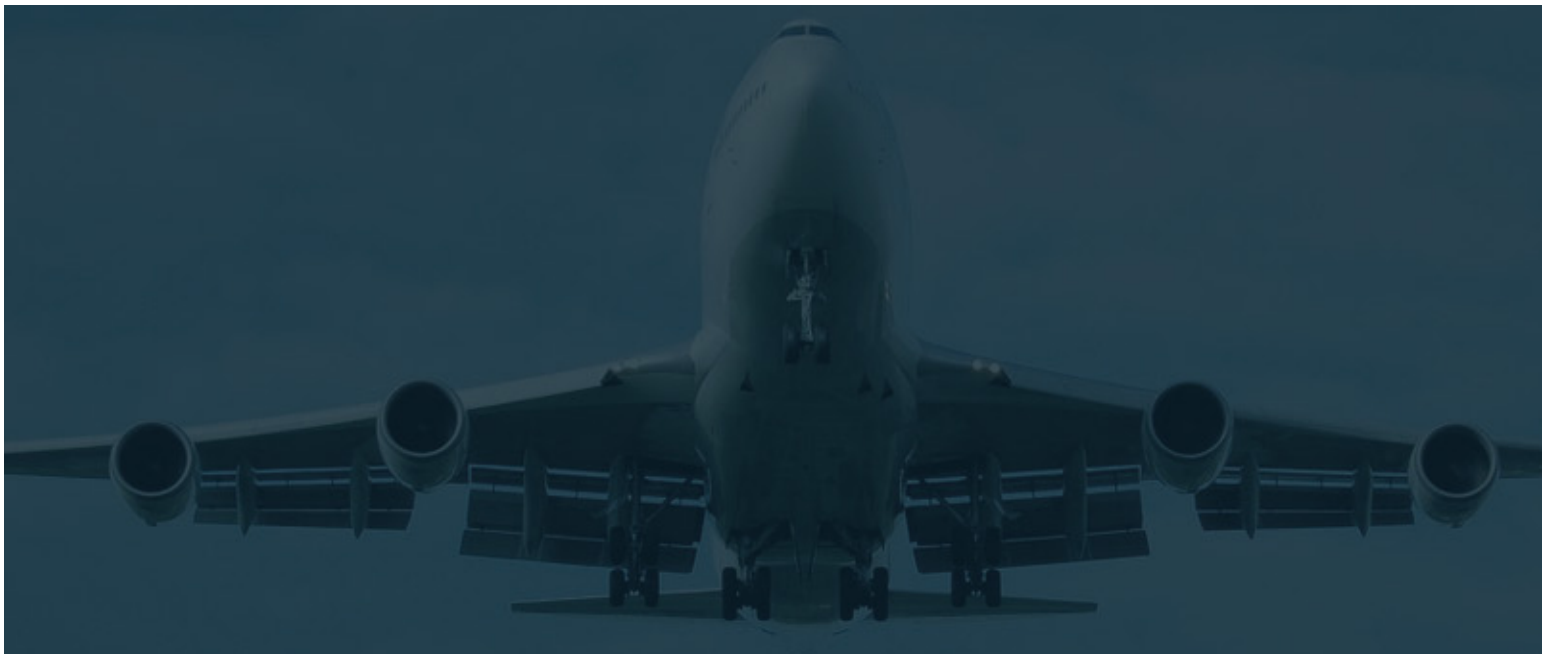

Compatibility and Compliance

MPM can create your maintenance program or you can accept and import data from a third party system such as OEM Maintenance Planning Documentation or the third party solution managing your maintenance program. EmpowerMX can accept data from a third party and can also send results back if required. This function means users can create, edit and update maintenance requirements against each asset or component.

Benefits for Airlines, MROs, OEMs, and Defense

- Controlled maintenance requirements by managing asset identification, applicability, periodicity and production planning
- Enhanced maintenance requirements process by importing resolved revision data
- Simplified applicability groupings with a maintenance requirement which allowed for periodicity variations between production plan information and populations of assets
- Clear and concise format of complex information
- Established checks and optimized maintenance requirements into convenient check packages
- Established distinct reports generated/controlled by users and made available for viewing to subscribers
- Compliance with aviation industry standards and regulatory rules
- Information available online 24/7/365 to all approved users

ABOUT EMPOWERMX

EmpowerMX is a world leader in providing intelligent maintenance solutions for today's aircraft. We are a global software company that creates innovative aviation maintenance solutions.

Our EmpowerMX software solution with its modules enables customers to significantly improve their entire maintenance operation.

Founded in 1999 and headquartered in Dallas, Texas, with offices in Europe and Far East, EmpowerMX is uniquely focused on the aircraft maintenance industry and is managed by aviation maintenance experts.
