

Planning Manager (FCPM)

Helping MRO providers plan complex maintenance activity events

FleetCycle[®] Planning Manager ensures compliance with maintenance and program requirements and helps manage contracts for 3rd party MRO work. It uses historical data to optimize and fine-tune your operational plans.

FleetCycle[®] Planning Manager is used for all heavy, line and shop maintenance activities and utilizes all resource data with skills and current training records along with facility capabilities. It is included in the FleetCycle[®] AERO, MRO, OEM, and Defense solutions—designed to ensure aircraft are fully airworthy and maintained in line with maintenance programs.

Production Planning

Each event is comprised of tasks to be completed by the relevant skilled personnel. Tasks can be standalone or can be grouped together as required, and the FleetCycle® engine will help construct the most efficient structure for these tasks.

Resource Planning

All required resources to complete any event are accessible within FCPM. This includes all personnel data, their skills and qualifications, time and attendance to capture any planned holidays or other events, all tooling required along with relevant certificates, and all materials required. Once the resource information is available, this data can be used along with the BOWs to ensure all required resources are available.

Capacity Planning

Capacity planning deals with both short and long term plans. These plans are generated from the BOW and the related resources required for all the tasks in each BOW.

Contract Management

FCPM manages 3rd party MRO work and our customers can generate the BOW and the work pack to be sent to the selected 3rd party MRO supplier. It is possible for the supplier to complete the work pack electronically within FleetCycle® providing the customer with a real time view of the progress through the work pack.

Benefits for Airlines, MROs, OEMs and Defense

- Optimized forecasting
- Clear visibility by Company, Hangar, Bay or Workshop
- Compliance with maintenance and program requirements
- Creation and analysis of multiple strategic maintenance plan scenarios
- Assistance in the selection of optimum strategic maintenance plan

ABOUT EMPOWERMX

EmpowerMX is a world leader in providing intelligent maintenance solutions for today's aircraft. We are a global software company that creates innovative aviation maintenance solutions.

Our FleetCycle® software solution with its modules enables customers to significantly improve their entire maintenance operation.

Founded in 1999 and headquartered in Dallas, Texas, with offices in Europe and Far East, EmpowerMX is uniquely focused on the aircraft maintenance industry and is managed by aviation maintenance experts.
